Statement of Relevance of References Listed
Unaccompanied by English Translation
Under 37 CFR § 1.98(a)(3)

In accordance with 37 CFR § 1.98(a)(3), the following concise explanation of the relevance of each listed reference that is not in the English language and unaccompanied by a translation into English is provided.

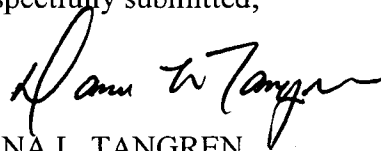

Japanese Patent No. 2003-134047: PROBLEM TO BE SOLVED: To constantly measure wavelength distribution of a transmission line during operation without influencing main signal light and to enable compensation using a distribution compensator based on a measured distribution value. SOLUTION: Wavelength dependency of transmission delay of an optical fiber which is the transmission line is measured by taking notice of a point that an optical wavelength multiple transmission system simultaneously uses a plurality of kinds of wavelength, constantly detecting frames which data signals of the respective wavelength channels have or detecting them in a short repetition time and relatively comparing their frame phases. Group speed distribution of the optical fiber is calculated from the wavelength dependency of the transmission delay and used for distribution compensation.

NON-PRIOR ART REFERENCE

Attached for the Examiner's consideration is an English translation of an Office Action issued April 18, 2006 in Japanese Patent Application No. 2003-277914 which relates to the present application.
